## Activity 1:::

### HTML CODE:::

```
<!DOCTYPE html>

<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Metaphor</title>
  <link rel="stylesheet" type="text/css" href="activity1.css">
</head>
<body>
  <div class="container">
    <h1 style="color:#ffffff" >Metaphor</h1>
    <p>A metaphor is a mapping from one domain to another. For <br>
      example, moo is to cow as beep is to car. These mappings<br> get so
      buried in our language that we don't even notice their<br> effects.</p>
    <p>For example, take the language used to describe a debate:</p>
    <ul>
      <li>"He shot down her ideas."</li>
      <li>"She defended her position."</li>
      <li>"She overwhelmed his arguments."</li>
      <li>"He had to retreat from that position."</li>
    </ul>
    <p>These are all debate-as-war metaphors. It's a zero sum game. <br>
      Someone wins and someone loses. The idea that both people <br>could
      learn from each other just doesn't come up.</p>

  </div>
</body>
</html>
```

### CSS CODE:::

```
body {
  font-family: Trebuchet MS, sans-serif;
  line-height: 1.5;
  margin: 9px;
  background-color: #E5EBDF;
```

```
        padding: 10px;
    }
    .container {
        width: 34%;
        height: 480px;
        margin: 9px auto;
        background-color: #E5EBDF;
        border: 2px solid #7B8B9A;
        padding: 10px; /*
        box-sizing: border-box;
    }
    h1 {
        text-align: left;
        color: white;
        background-color: #7B8B9A;
        padding: 8px;
        margin: 2px;
    }

    p {
        margin-bottom: 1rem;
        -webkit-text-fill-color: #5f4e37;
    }

    ul {
        list-style: none;
        padding: 10px;
        margin: 20px;
        -webkit-text-fill-color: #0D0D0F;
    }

    li {
        margin-bottom: 5px;
    }
```
